

Converting old Recipe Center Software database to version 5.0

Recipe databases from lower versions of *Recipe Center Software* can still be used in the new *Recipe Center* version 5.0. To do this, one has to convert the database first, following these steps:

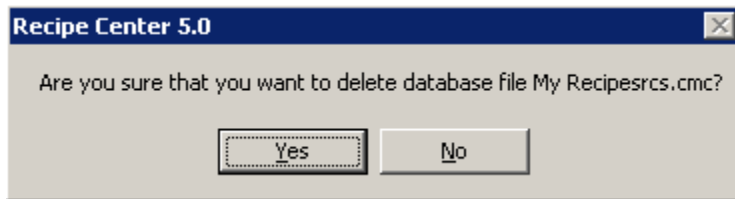

- 1) Open *Recipe Center* version 5.0 software. Then, click *Database > Open* from the menu.

- 2) From the *Open a database* window, select *Old Database (*.cmc)* as File type then select an old RCS database file to convert. Click the *Open* button.

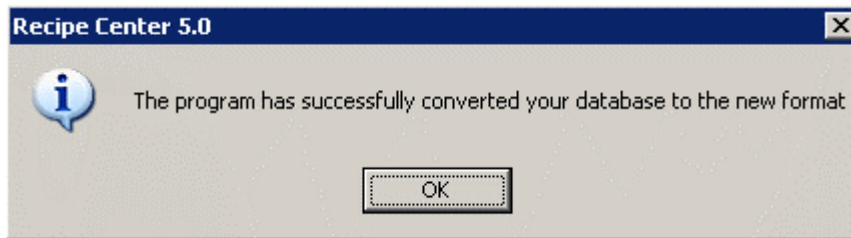

You will be asked whether you want to delete the old database file.

G Selecting **Yes** means that when converted, the old *.cmc* file will be deleted from the folder. The newly converted database (*.rcs* file) will then be placed in the folder *\\My Documents\\My Recipe Center\\Data*. Selecting **No** means a copy of the old database (in *.cmc* file format) will be kept even after the conversion process.

The program will then proceed with the conversion whether you selected **Yes** or **No**. A confirmation message will be shown if it is successful. Click **OK** to close the pop-up dialog box.

The converted recipe database will then be automatically loaded in your Recipe Center program.
